Smart plastic solutions across Europe – with a personal touch.

Passion for Plastics. Since 1971.

As a family-owned, decentralized company, the Hromatka Group has built a strong presence and reputation across Europe since their beginning in Vienna in the 70ies. Today we reliably supply more than 8,500 active customers with tailor-made raw materials. Yet we see ourselves as far more than a distributor with in-house compounding capabilities – we are advisors, enablers and partners in innovation.

We accompany our customers from the very first idea through to full-scale production. With technical expertise, market insight and, above all, an unwavering passion for plastics, we are committed to creating value at every stage.

We believe our responsibility extends well beyond simply moving polymers from A to B. That is why our services do not end at the factory gate – they continue where new possibilities begin:

- We stand by our customers from material selection to processing support and tooling optimization.
- In our state-of-the-art laboratories, we analyze and test materials to the highest standards and deliver PCF certification that ensures transparency and measurable sustainability.
- We empower plastics processing companies with engineering expertise, advanced

simulation and prototype manufacturing – from the smallest medical and electronic components to large-scale solutions for the automotive, household and construction industries.

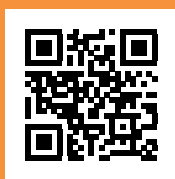

- With our safety stock service, we ensure maximum supply security – providing peace of mind, even in turbulent times.

With a Europe-wide infrastructure and warehouses in almost every country, we guarantee seamless supply, short delivery routes and reliable availability. Wherever our customers process, they can count on consistent material quality.

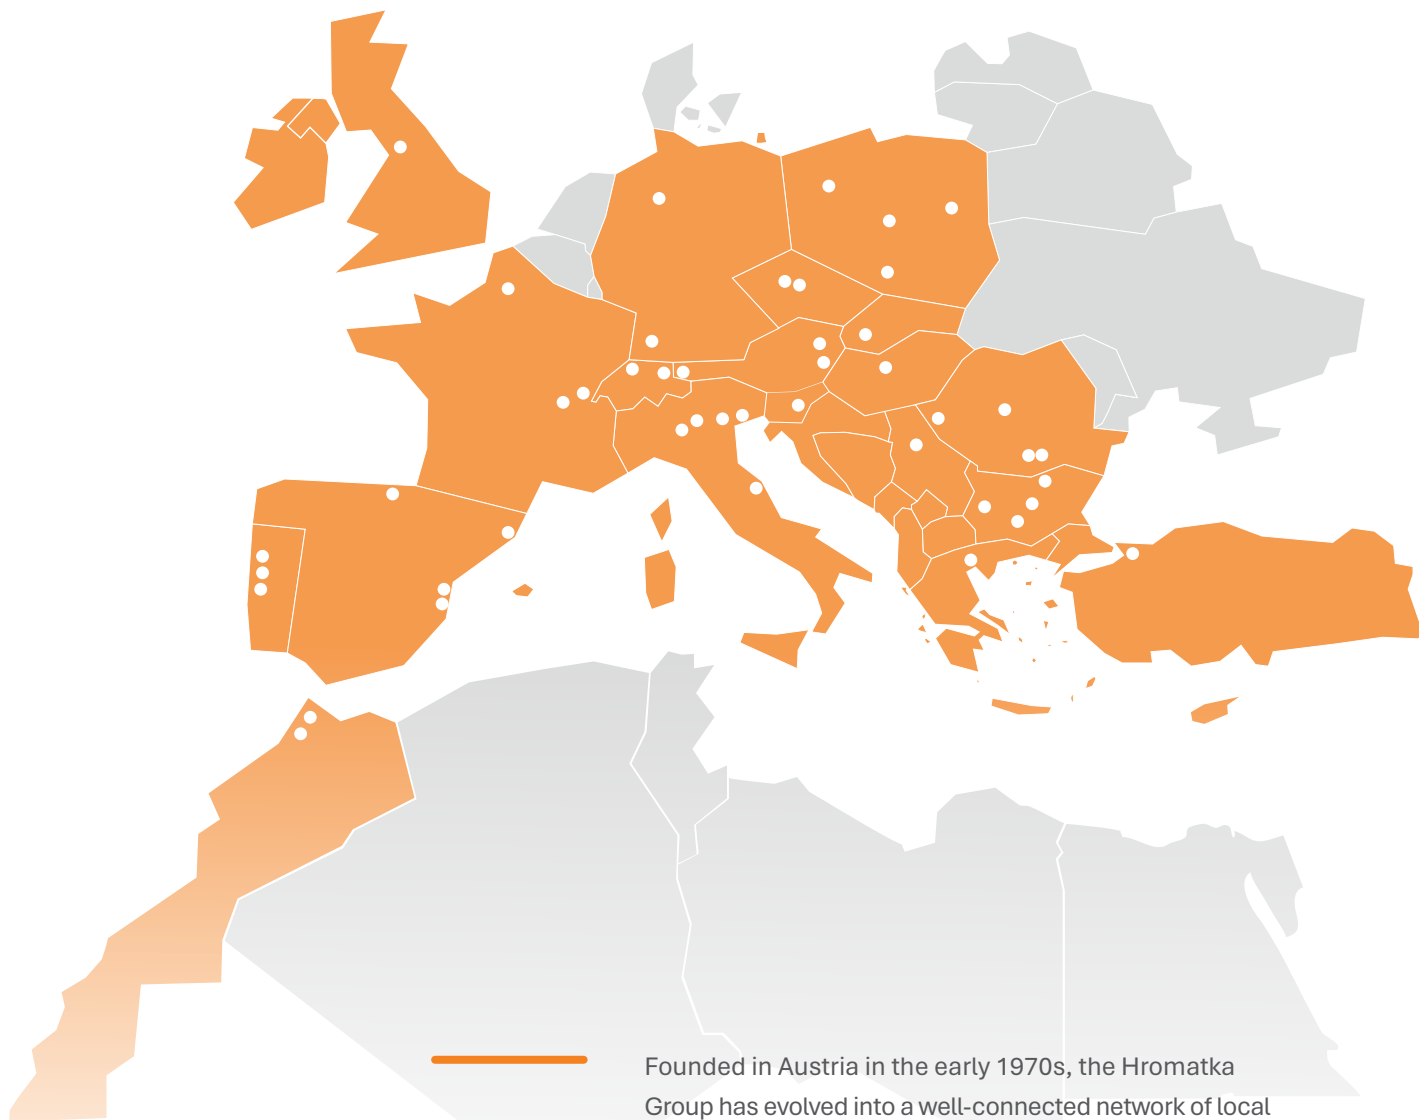

Reliable.

Forward-Looking.

Connected.

We don't strive to be the biggest.
But the best.

Distribution. Adding Value.

Founded in Austria in the early 1970s, the Hromatka Group has evolved into a well-connected network of local distributors with strong regional brands such as Plastoplan, Grässlin Kunststoffe, Lenorplastics, Aectra Plastics, Guztech, and others.

In 2005, we extended our distribution expertise by founding SAX Polymers, offering custom compounding in small quantities - a service unique at that time. Since then specialized polymers have been compounded in the heart of Europe, and our portfolio is still grown steadily.

Today, Hromatka Group combines the strength of family-run local companies with the reach of an international network, supplying premium products across Europe, Turkey and parts of North Africa.

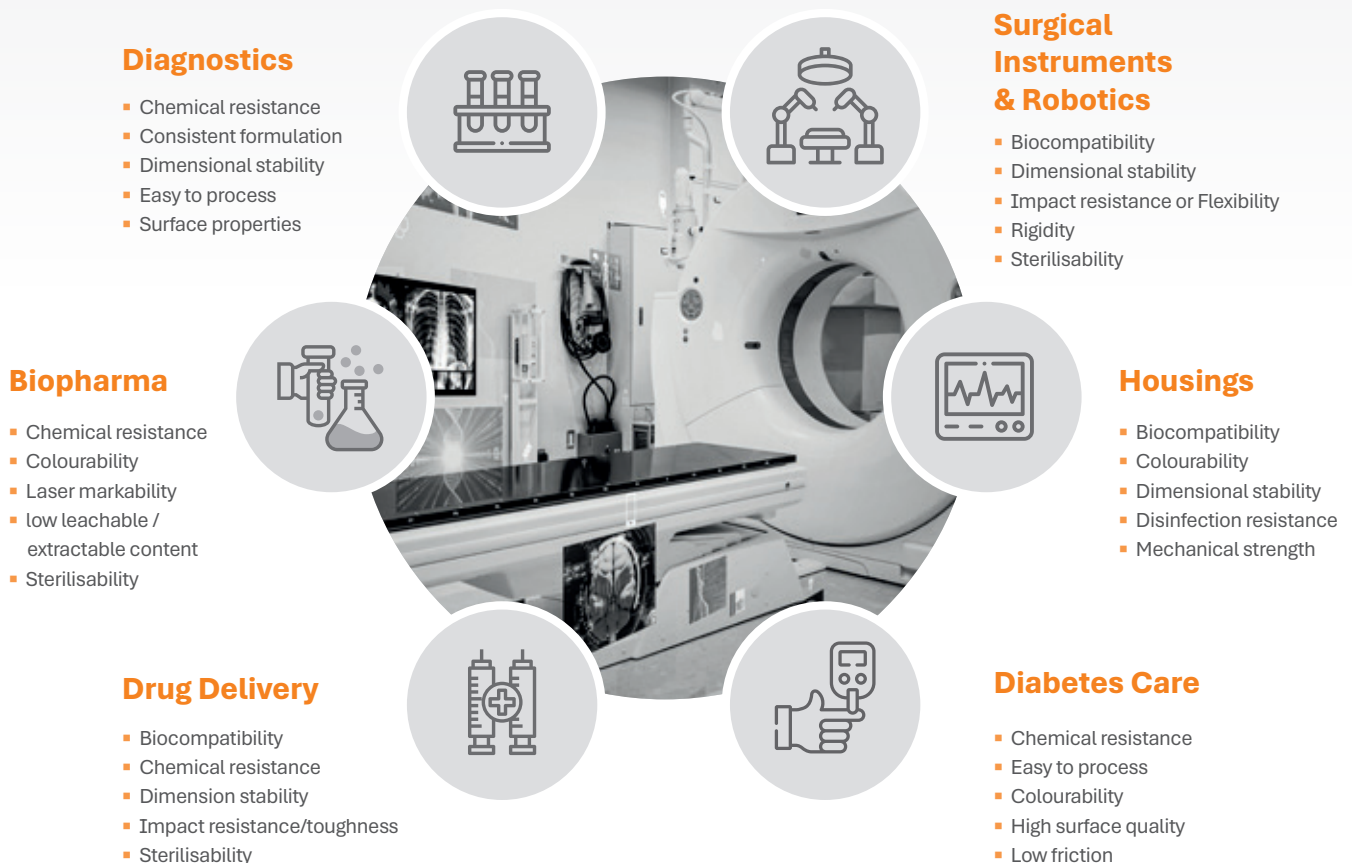

Single-Source Partner. For Healthcare-Solutions.

We support customers across Europe in every phase of their project.

The demand for tailor-made plastic solutions for medical devices, diagnostic technology, surgical instruments and packaging for pharmaceutical products is growing. It is therefore important for medical device manufacturers to have a reliable partner at their side who understands healthcare. The Hromatka Group is such a partner. With many years of experience, in-depth technical expertise in plastics technology, innovative strength and a diverse portfolio of high-quality plastic granulates and compounds, we deliver exactly the plastic solutions our customers need to be successful in a dynamic and fast-growing market: high-performance plastics for reliable medical technology applications with their particularly high demands on material quality and processing. Products that meet the highest standards of quality, safety and sustainability.

Strong network. For projects from concept to product.

Through close cooperation with leading companies and research institutions, as well as our network of trusted product development engineers at Impetus Plastics Engineering, we support projects from the initial concept to the finished product.

Strong partners. For reliable products.

Supplying the future

The Hromatka Group offers one of the most comprehensive portfolios of thermoplastic polymers in Europe. With our wide variety of approved engineering thermoplastics, polyolefins and TPEs with biocompatibility ratings, we offer high-quality plastic solutions for numerous healthcare applications.

Our plastic solutions guarantee

- Biocompatibility in accordance with ISO 10993
- Approval in accordance with USP Class VI
- Suitable for sterilisation and disinfection processes
- Skin compatibility

More than 200 dedicated engineers and sales experts carefully identify and sample the ideal

material to ensure the most suitable choice for the success of every project. Whether standard, engineering or high-performance plastics – we deliver solutions without limits.

With a strong focus on sustainability, most of our polymers are available as fossil-based and biobased grades. And because every project is unique, we offer customized compounding – turning material into tailor-made innovation.

Hromatka Group

Our partners for medical technologies.

We Speak Healthcare

Because success always starts with people

There is hardly any other industry in which product requirements are as high as in healthcare. We are familiar with the specific regulatory requirements and legal framework conditions as well as the standard procedures for sterilisation and disinfection. And we understand the needs of medical device manufacturers in terms of regulations and high-quality standards.

We are not just any plastics supplier – we are your all-round partner for medical technology.

Because as different as the requirements may be, there is one thing that unites them all: people. Outstanding employees are the biggest value of any company. Their expertise, commitment and passion make the work more than valuable. They give it a soul. Whether in development, sales, logistics or production – everyone contributes to our joint success.

We firmly believe that diversity in personalities, experiences, and cultures lays the foundation for a strong, respectful and open-minded environment, fostering innovative solutions that go beyond mere business matters. We combine industrial expertise with human connection and build longterm partnerships characterized by trust, fairness and reliability. We are convinced that sustainable business success can only thrive where values are lived, people are truly appreciated, and visions are brought to life together.

Closing the loop

Sustainability for and with us begins with renewable raw materials and ends with the responsible take-back of production waste for post-industrial recycling. All our companies are certified ISCC PLUS and ISO 9001, ensuring comprehensive quality and sustainability. This is how we create a holistic solution that protects the environment while also easing the strain on your budget.
